

MSI 1

MULTIPLE UNIT SERIAL INTERFACE

McIntosh

The Compendium

Allows the **MR 7082** and **MR 7083** tuners and the **MCD 7000**, **MCD 7005**, **MC 7007** or **MCD 7008** CD players to be controlled by a later **McIntosh** remote control system data output. Converts serial output data from current control centers into parallel data signals for earlier **McIntosh** source components. The **MSI 1** also allows a second McIntosh Tuner, a second McIntosh CD Player and 12 different Nakamichi tape deck models to be controlled by a McIntosh Remote Control System.

MSI 1 - Sold from 1994 - 1998. S/N: KD1001~KD????
